Work authorisation: In the UK on a Student visa, completing an MSc Computing at the University of Sunderland (finishes October 2026). Eligible for the UK Graduate visa — 2 years of full, unrestricted work — from late 2026, and expect to meet the Skilled Worker “New Entrant” salary rate, which lowers the salary threshold for a sponsoring employer.

PROFESSIONAL SUMMARY

Backend-focused software engineer with 6+ years building and scaling secure APIs and payment systems across fintech, HR/payroll, healthcare and e-commerce. Strong in PHP/Laravel and Python/FastAPI, with React on the front end and recent hands-on work integrating OpenAI into a live product. Currently completing an MSc Computing with a carbon-aware cloud-scheduling dissertation. Comfortable owning services end to end — design, delivery, testing, deployment and mentoring.

CORE SKILLS

Languages: PHP, Python, JavaScript, TypeScript, SQL

Frameworks: Laravel, FastAPI, Node.js, React, Vue.js, Next.js

Databases: MySQL, PostgreSQL, MongoDB, SQL Server, Redis

APIs & integrations: REST, GraphQL, OpenAI API, Stripe, Paystack, Flutterwave, Interswitch, SendGrid

Cloud & DevOps: Docker, CI/CD, GitHub Actions, AWS (working knowledge), Azure, Vercel, Nginx, Apache

Testing & docs: PHPUnit, Pytest, Postman, Swagger / OpenAPI

Security & auth: OAuth 2.0, JWT, HTTPS / TLS, data encryption

Ways of working: Agile / Scrum, code review, mentoring, technical documentation

PROFESSIONAL EXPERIENCE

Software Engineer (Backend) — Fullware Solutions Limited, Lagos, Nigeria

September 2022 – September 2025

- Designed and shipped secure REST APIs for fintech and e-commerce clients, covering payments, onboarding and reconciliation.
- Integrated four payment providers (Stripe, Paystack, Flutterwave, Interswitch) with idempotency, webhook reconciliation and automated retries.
- Reduced typical API response times by an estimated 55–65% via query optimisation, indexing and Redis caching.
- Enforced TLS, OAuth 2.0 and JWT across client-server communication.
- Mentored junior engineers; introduced PR review standards, automated tests and CI checks.

Full-Stack Developer & AI Engineer (Internship) — Weeplly, United Kingdom

January 2026 – February 2026

- Built an AI-powered CV-tailoring SaaS from scratch with Python (FastAPI) and React, deployed on Vercel.
- Integrated OpenAI GPT-4 to analyse CVs and job descriptions and generate ATS-optimised output in real time.
- Built a PDF/DOCX parsing pipeline (pdfplumber, python-docx) with async PDF generation via WeasyPrint.
- Implemented a retrying SendGrid email pipeline with async threading; delivered a responsive React UI with live preview.

Backend Engineer — Page Financials (Forsterfields & Griffins Technology), Lagos

September 2021 – May 2022

- Built and maintained backend services for HR/payroll and “fintech-in-a-box” products, delivering features in agile sprints with product managers.
- Improved reliability through database tuning and server-side caching; maintained security compliance with regular patching and encryption standards.

Software Engineer — Software Business Solutions & Consulting (SBSC), Lagos

January 2021 – October 2021

- Developed REST APIs for enterprise and client-facing systems; wrote complex SQL queries and stored procedures for efficient data retrieval.

- Supported production systems and contributed to Azure-hosted deployments.

Software Developer — Cavidel Limited, Lagos

March 2020 – March 2021

- Built HR, accounting and hospital-management applications backed by secure REST APIs.
- Refactored legacy code into modular architectures, reducing maintenance overhead.

Backend Developer — Phosmobile Digital Solutions, Lagos

January 2019 – February 2020

- Built loan-management and disbursement APIs with Laravel and GraphQL.
- Partnered with Vue.js front-end developers to ship end-to-end features.

Web Developer (Internship) — HNG Tech, Lagos

September 2018 – December 2018

- Built and maintained web applications with PHP/Laravel; turned requirements into working prototypes.

EDUCATION

MSc Computing — University of Sunderland, United Kingdom

September 2025 – October 2026

- Dissertation — GreenOps Scheduler: a carbon-aware web scheduling platform (Next.js, TypeScript) with a constraint-aware recommendation engine, comparison dashboard and plain-language explanation panel. Scenario-based evaluation showed measurable estimated-emissions reductions where workload flexibility exists.

BSc Industrial Chemistry — Obafemi Awolowo University, Nigeria

2017

SELECTED PROJECTS

GreenOps Scheduler (2026) — Carbon-aware scheduler — Next.js / TypeScript, REST API, recommendation engine with constraint handling, explanation panel and persistent evidence log.

AI CV Tailoring Tool (2026) — FastAPI + React + OpenAI GPT-4, deployed on Vercel; document parsing and async PDF generation.

BulkSMSLive (2022) — Bulk SMS platform and API workflows — Laravel / PHP.

Volunteer Africa (2023) — Programme and content platform — PHP / CakePHP.
